ANTIMICROBIAL CONTAINING SOLVENTLESS

HOT MELT ADHESIVE COMPOSITION

Abstract of the Disclosure

An adhesive composition having dispersed therein a broad spectrum antimicrobial agent for use in medical applications, such as an adhesive for surgical drapes, wound dressings and tapes. The adhesive is composed of acrylic polymers, tackifiers and a preferred antimicrobial agent, diiodomethyl-p-tolylsulfone. The adhesive composition is essentially solventless and capable of application in a hot melt process while maintaining stability at elevated temperatures in the range of 275°F to 350°F, which not only allows hot melt application, but allows for ethylene oxide sterilization under heat stress.
